1. The first part of the paper is devoted to a general
discussion of the problem. It is shown that the
problem is of great importance and that it has
not been completely solved. The author then
presents a new method for solving the problem.
This method is based on the use of the
variational principle. It is shown that this
method is more accurate than the previous
methods. The author then applies this method
to the case of a simple harmonic oscillator.
It is shown that the results are in good
agreement with the exact solution.

2. In the second part of the paper, the author
applies the method to the case of a
damped harmonic oscillator. It is shown that
the method is still applicable and that the
results are in good agreement with the exact
solution. The author then discusses the
case of a forced harmonic oscillator. It is
shown that the method is still applicable and
that the results are in good agreement with
the exact solution. The author then discusses
the case of a nonlinear oscillator. It is shown
that the method is still applicable and that
the results are in good agreement with the
exact solution.

1. The first part of the paper is devoted to a general discussion of the problem of the existence of a solution of the system of equations (1) for arbitrary values of the parameters α and β . It is shown that the system has a solution if and only if the condition $\alpha + \beta = 1$ is satisfied.
